SUMMARY

Computer Science undergraduate with hands-on experience developing, testing, and debugging 3D games independently. Experienced in gameplay systems, enemy AI, pathfinding, animation systems, functional testing, and bug investigation. Built and published playable game projects while applying structured testing and iterative debugging practices.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science & Engineering

2023 – 2027

St. Andrews Institute of Technology and Management, MDU

Semester VI SGPA: 7.56/10

PROJECTS

- Project INVERTED – Third-Person Action Game** | [Play Build](#) 2026
Technologies: C#, Unity, Animator Controller, Raycasting, State Machine AI
 - Designed and developed a third-person sci-fi action game, independently planning gameplay mechanics, environments, assets, and progression.
 - Implemented Health/Plasma mechanics, melee combat, interactive objectives, and multi-phase boss encounters.
 - Integrated cinematic sequences, animation transitions, and player-control handoffs between scripted events and gameplay.
 - Published a playable Windows build on itch.io.
- Crimson Tactics – Grid-Based Tactical Game** | [Play Build](#) 2026
Technologies: C#, Unity, A* Pathfinding, ScriptableObjects, Data Structures & Algorithms
 - Designed and implemented a procedural **10×10 grid-based tactical system** with configurable obstacles and player movement.
 - Implemented *A* pathfinding* for enemy movement rather than relying on engine-provided navigation.
 - Built modular gameplay systems using ScriptableObjects and interfaces for configurable obstacles and enemy behavior.
 - Tested and debugged the complete gameplay loop to ensure reliable player movement, obstacle handling, enemy detection, and game-state transitions.
- Project Beyond the Uniform – First-Person Shooter Game** | [Gameplay Video](#) 2025 – 2026
Technologies: C#, Unity, Raycasting, NavMesh, Animator, Particle Systems
 - Developed a functional FPS featuring first-person movement, raycast-based shooting, modular enemy AI, navigation, and layered character animation.
 - Implemented enemy systems covering perception, movement, combat, health, and navigation using modular C# components.
 - Conducted **functional, integration, and gameplay testing** across movement, shooting, enemy behavior, animation, and level progression.
 - Identified and resolved gameplay defects involving enemy sliding, audio synchronization, enemy detection persistence, and NavMesh navigation failures.

TECHNICAL SKILLS

- Programming:** C#, C++, Object-Oriented Programming, Data Structures & Algorithms
- Game Development:** Gameplay Systems, Game Mechanics, Raycasting, Physics, Animation Systems, Enemy AI, State Machines, Pathfinding
- Game QA & Testing:** Functional Testing, Gameplay Testing, Bug Identification & Reproduction, Regression Testing, Debugging, Test Cases, Bug Reporting
- Tools:** Unity, Git, GitHub, Jira, Visual Studio Code
